

CALCAP Standard Edition – Quick Start

NOTE: *The CalCAP is a DOS program that works only under DOS, FreeDOS, Windows 95/98 and Windows XP. It is not compatible with Windows Vista or later operating systems. See the CalCAP web site (www.calcaprt.com) for more information and for work-arounds.*

Windows XP Installation Procedure:

- (1) Insert the CalCAP Standard Edition (Win XP Installation) disk into Drive A.
- (2) Click on Start, then click on Run ...
- (3) Type A: CalCAP_2007_SETUP, then click OK.
- (4) The installation program will transfer all of the files for the CALCAP program into a subdirectory (\CALCAP2007) on Drive C. The standard installation package installs English and Spanish versions of the CalCAP. If you want to install a different language version consult the CalCAP manual or the additional instructions on the back of this setup sheet.
- (5) To start the CalCAP program, double-click on the CalCAP icon. You will see a list of all of the installed versions of the CalCAP program, and a DOS prompt (C:\CALCAP2007>). Type the name of the program you wish to run at the DOS prompt, then press the Enter key.
- (6) When the CalCAP program is finished, you will be returned to the DOS prompt (C:\CALCAP2007>). Type 'EXIT' to return to Microsoft Windows.

Win 95/98 Installation Procedure:

- (1) Insert the CalCAP Standard Edition (Win 95/98 Installation) disk into Drive A.
- (2) Click on Start, then click on Run ...
- (3) Type A: SETUP, then click OK.
- (4) The installation program will transfer all of the files for the CALCAP program into a subdirectory (\CALCAP) on Drive C. If you want to install a foreign language version of the CalCAP, be sure to select the CUSTOM installation option.
- (5) To start the CalCAP program, double-click on the CalCAP icon. You will see a list of all of the installed versions of the CalCAP program, and a DOS prompt (C:\CALCAP>). Type the name of the program you wish to run at the DOS prompt, then press the Enter key.
- (6) When the CalCAP program is finished, you will be returned to the DOS prompt (C:\CALCAP>). Type 'EXIT' to return to Microsoft Windows.

DOS Installation Procedure:

- (1) Insert the CalCAP Standard Edition (DOS Installation) disk into Drive A.
- (2) Type A: INSTALL
- (3) The installation program will transfer all of the files for the CALCAP program into a subdirectory (\CALCAP) on Drive C.
- (4) After the program is installed, you will be in the \CALCAP subdirectory in Drive C. To see a list of all installed CalCAP routines, type 'CALCAP' at the DOS prompt. To install foreign language versions of the CalCAP, type the code word for the language you want to install (see the other side of this instruction sheet) then type 'CALCAP' to confirm that the routines were installed.

CALCAP Manual and Supplementary Materials:

In addition to the CalCAP program, your installation package includes the CalCAP manual and other materials on a separate diskette. When referring to the manual, keep in mind that the Windows XP version of the CalCAP is installed in a directory called "CALCAP2007" instead of "CALCAP". The manual and supplementary materials can be read on any computer using the Adobe Acrobat Reader.

Printing Results from the CalCAP:

Since the CalCAP is a DOS-based program, it is not necessarily compatible with newer printers that are designed to work only under Microsoft Windows. While some printers will work just fine, others will permanently "hang" or give an error message. As a workaround, you can send an ASCII text file directly to disk (REVIEW.TXT). This file can be read by any Windows or DOS-based word processor, and a link to the file is included in the group of CalCAP programs (the icon is labelled "Last Printout"). The ASCII file is created by pressing "D" for disk instead of "P" for print when you are viewing the test results.

For more information, contact Eric N. Miller, Ph.D. at 323-761-9422.

Installation of Foreign Language Versions of the CalCAP

Win XP Installation Procedure: Follow the standard installation procedures shown on the other side of this instruction sheet. Switch to the DOS prompt by clicking on the "CalCAP 2007" icon or the "CalCAP Command Prompt" icon. Type the installation code word shown in the table below to de-compress and install the necessary program files. Then type 'CALCAP' at the DOS prompt to confirm that the routines were installed.

Win 95/98 Installation Procedure: Follow the standard installation procedures shown on the other side of this instruction sheet. When prompted to choose between a Typical, Compact or Custom Installation, choose the Custom option. You will then have the option of installing any of the available foreign language translations of the CalCAP. The table below shows the translations that currently are available.

DOS Installation Procedure: Make sure that you are at the DOS prompt in the CalCAP subdirectory. Type the installation code word shown in the table below to de-compress and install the necessary program files. Then type 'CALCAP' at the DOS prompt to confirm that the routines were installed.

Installation Code Word	Standard CALCAP		Abbreviated CALCAP	Mini CALCAP
	Stimulus Materials	Task Instructions	Task Instructions	Task Instructions
DANISH	✓	✓	✓	✓
FLEMISH	✓	(not available)	(not available)	(not available)
FRENCH	✓	(not available)	(not available)	(not available)
NORWAY	✓	✓	✓	✓
SPANISH	✓	✓	✓	✓

Code Page Adjustments for Norwegian and Danish CalCAP

The Norwegian and Danish versions of CalCAP require that your computer be configured to use the Nordic or Multilingual character sets. Otherwise the characters ø and Ø will not appear correctly. If your computer already displays these characters in MS-DOS programs, then it is properly configured. Otherwise, follow the instructions below to configure your computer:

To configure your computer for an alternate MS-DOS character set:

- 1) Add to CONFIG.SYS:

```
country=047,865,c:\dos\country.sys
device=c:\dos\display.sys con=(,2)
```

(Note: Country 045 is Denmark, Country 047 is Norway; Code page 865 is Nordic, Code page 850 is Multilingual)

- 2) Add to AUTOEXEC.BAT:

```
c:\dos\nlsfunc
c:\dos\mode con cp prep=((865,437) c:\dos\ega.cpi)
c:\dos\mode con cp select=865
```

(Note: Code page 865 is Nordic, 850 is Multilingual, 437 is U.S.)

These examples assume that you are using MS-DOS 5.0 or higher and that DOS is located in C:\DOS. The files COUNTRY.SYS, DISPLAY.SYS, MODE.COM, NSLFUNC.EXE and EGA.CPI must be in your DOS subdirectory. Consult your MS-DOS manual or the file COUNTRY.TXT supplied with MS-DOS for more information on configuring your computer for alternate character sets.
